

**PLANTS⁺ OF THE BLACK RANGE
OF NEW MEXICO
VOLUME TWO**

**THIS CHECKLIST RECOGNIZES THE
PLANT COLLECTING EFFORTS OF
WILLIAM R. CHAPLINE, JR.
IN THE BLACK RANGE DURING
1914-1916.**

PLANTS+ OF THE BLACK RANGE OF NEW MEXICO

AN ANNOTATED CHECKLIST
EDITION ONE OF VOLUME TWO

This checklist of the plants (including a few lichen and other non-plant species) of the Black Range of southwestern New Mexico draws from a variety of sources. It is a work in progress and undoubtedly contains errors. If you encounter errors of substantive omission or commission or administrative errors (broken or incorrect links, spelling, etc.) please let me know at rabarnes@blackrange.org so that the errors can be corrected. Your help in this manner will be of benefit to the general community.

Methodology

This checklist was put together in the following manner:

- ✦ A search of the [SEINet](#) data base (Arizona & New Mexico Chapters) was conducted to determine the possible species in the Black Range;
- ✦ A preliminary search of the [Consortium of North American Lichen Herbaria](#) data base was conducted to determine possible species in the Black Range (this work is incomplete);
- ✦ These listings were matched against the files of the [Vascular Plants of the Gila Wilderness](#) and the [photo galleries of the Black Range website](#);
- ✦ If there was a match, a link to the species page on the Vascular Plants of Gila Wilderness site and/or the appropriate page on www.blackrange.org was entered in the notes column;
- ✦ A review of the Vascular Plants of the Gila Wilderness data base was conducted to determine if an image from the Black Range is included on the species page at that site. If so, the Vascular Plants of the Gila Wilderness was used to verify that the species can be found in the Black Range. In the notes column this is indicated by an entry for the location where the species was found followed by a '(V)';
- ✦ If the species is included in the photo galleries of the Black Range website, the location where the species was found was entered in the notes column followed by "(B)";
- ✦ For all species not verified for the Black Range in the review of Vascular Plants of the Gila Wilderness or the

Black Range website, a search for specimen sheets was conducted;

- ✦ If a specimen sheet from the Black Range was located for the species, an entry noting this was made in the notes column. The name of the collector and the general location where the specimen was collected was entered in the notes column as a link to the specimen sheet. Such entries are shown in dark blue.
- ✦ Species which are not verified for the Black Range are indicated by a light blue "cell filling" in the first cell in the species row.

Disclaimers and Points of Clarification

In some cases, you may note that an entry from the Vascular Plants of the Gila Wilderness data base has been entered on the checklist but the initial cell of the species listing is filled in light blue indicating that the species was not verified for the Black Range following the process described above.

It is quite possible that most (perhaps close to all?) species listed in the Vascular Plants of the Gila Wilderness data base are found in the Black Range. But absent a clear documentation of that fact, we have highlighted them for more scrutiny - the light blue cell. On the flip side of the coin, there are some listings in this checklist which are not listed on the Vascular Plants of Gila Wilderness site.

We have attempted to adhere to a conservative definition of "the Black Range". Basically, it is the area confined by the major road systems which border the range; NM-59 in the north (taking in some of the area north of this highway); North Star Road on the NW side of the range; NM-35 from the junction of North Star to NM-152; NM-61 from NM-152 to US-180; US-180 to NM-26; NM-26 to NM-27; NM-27 to Hillsboro; and then roughly northward to Winston/NM-59. These general boundaries are shades of gray - City of Rocks State Park is included, the area to the east of US-180 is not included until the foothills are encountered; and the eastern foothills are included for roughly 5 miles west of Hillsboro and north.

Black Range website photo galleries: The images in the galleries have not been thoroughly vetted but are believed to be accurately identified.

In some cases the SEINet listing could not be verified for the Black Range, as noted above. There may be several reasons why this is the case, including; inconsistencies found on the specimen sheets which clouded the area of collection, and a certain lack of "search capability" on the part of the editor. Most importantly, however, the entries listed in light blue should serve as a guide for the efforts of future collectors.

Vascular Plants of the Gila Wilderness is the premier botanical website for southwestern New Mexico. We all owe a debt to Russ Kleinman and the many other contributors to that site for the work they have done (and regularly do).

The "verification listing" has no other significance than the fact that the indicated source was used for initial verification. It does not indicate, for example, that the specified location is the best location to see the species.

Scientific names may be subject to challenge. The species name used here generally follows the nomenclature used in **Vascular Plants of the Gila Wilderness**. In some cases speciation determinations may be in dispute. In some cases the "generally accepted name" may be in dispute.

Unless there is no accepted English common name for a species, at least one of the most common names is listed.

Other Volumes

This checklist is the second volume in a planned three-volume set. All three volumes present the same information (except there will be minor variations due to digital updates which occurred between the publication dates of the various volumes) but it is arrayed differently.

- ✦ In the first volume, plant species are listed in alphabetical order by family name, and then by

scientific species name (Latin binomial). That volume includes a listing of the plant collectors who collected the specimens referenced in the checklist.

- ✦ In this volume, species are listed in alphabetical order by scientific species name (Latin binomial). This volume also lists the sites most frequently referenced in the checklist and provides a general description of their locations.
- ✦ In the third volume, species will be listed in alphabetical order by English common name.

We currently anticipate that Volumes Three will be issued prior to the end of 2020.

Second Edition

We plan one more edition of this checklist, to be issued during calendar year 2022.

Your help in improving this, the first edition, will be reflected in the second edition. No further editions are planned at this time.

Copyright

This checklist is not available in hard copy; you can not buy it. It is free. If you have a copy, please forward it to anyone who might like to have it. The Black Range website does not accept advertisements nor does it accept monetary donations. It is "not-for-revenue". It is about sharing knowledge. This publication is available as a .pdf on the [Black Range Website](#) or in magazine format at our [bookcase](#).

This publication is offered to you under a Creative Commons non-commercial license; you are free to use it for whatever non-commercial purpose you wish. Copyright will be aggressively enforced and penalties exercised in the case of any unauthorized commercial use.

William R. Chapline, Jr.

William Ridgely Chapline, Jr. was born on January 10, 1891 in Lincoln, Nebraska and died on December 19, 1986.

William R. Chapline, Jr. graduated from the University of Nebraska with a Bachelor of Sciences degree (forestry, botany, and agronomy) in 1913. While in school, he worked summers for the Forest Service, U.S.D.A., on the Nebraska and Coconino National Forests.

Following graduation, he almost immediately began field work as noted in "[Great Basin Station - Sixty Years of Progress in Range and Watershed Research](#)" by Wendell M. Keck, USDA Forest Service Research Paper INT-118, 1972, p. 7.

"As long ago as 1939, Lincoln Ellison remarked in a talk at the Utah State Agricultural College:

Great Basin may be regarded as one of the two cradles of range research in this country. The other is Jornada Range Reserve in New Mexico. It is said that almost everybody in range research has, at one time or another, worked on the Jornada, and almost the same may be said of the Great Basin.

He named A. W. Sampson and F. S. Baker, who were then teaching at the University of California; W. R. Chapline, who had become Chief of Range Research for the Forest Service as early employees at Great Basin. At the beginning Director Sampson apparently was the only yearlong employee. In his annual report for 1913, he wrote:

During the active field season there were three temporary assistants and one permanent assistant. The temporary men were Messrs. William R. Chapline, Jr., who now has a permanent appointment in the Forest Service as Grazing Assistant . . .

He comments that Mr. Chapline's services began on June 1 and ended on November 15."

At that time, temporary assistants for the summer field season were paid \$75 a month plus \$25 for expenses. (ibid. p. 8)

Chapline's appointment as a Forest Service Grazing Assistant was at the Jornada Experimental Range in New Mexico and by 1914-1916 he was collecting a significant number of plant specimens for the Forest Service. Of

interest to us is that many of these specimens were collected on the east slope of the Black Range south of Hillsboro. (He, of course, was also collecting elsewhere.)

In 1920, [The University of Nebraska Alumni Association](#) noted that "William R. Chapline of the U. S. Forest Service has been promoted to inspector of grazing in charge of all grazing investigations." (p. 26)

Between 1920 and 1925 he was Chief of the Office of Grazing Studies, Branch of Grazing and worked with the likes of Will C. Barnes and James T. Jardine.

The "List of Technical Workers in the Department of Agriculture - 1926", Miscellaneous Circular No. 73, March 1926 noted that Chaplin held a Bachelor of Science degree and was the Inspector of Grazing, in charge at the Forest Products Laboratory, Grazing Research, in Madison, Wisconsin. (At that time, Aldo Leopold was the Associate Director of the U. S. Forest Products Laboratory.) In 1928, he held the same position ("Miscellaneous Publication No. 31", July 1928 p. 35). "Miscellaneous Publication No. 63", July 1929 (p.42) listed Chaplin as the Senior Inspector of Grazing, in charge, in the Range Research Branch of U.S.D.A..

In 1924, he joined with L. C. Gray, O. E. Baker, and F. J. Marschner to publish "The Utilization of Our Lands for Crops, Pasture, and Forests" in the [USDA Yearbook of 1923](#) (p. 415-506) This was, at the time, an influential work and was cited regularly. He was the author and/or co-author of many significant works during his career.

Chapline retired as Chief of the Division of Range Research in 1952. Following his retirement from the Forest Service he became Chief of the Forest Conservation Section of the Food and Agriculture Organization of the United Nations. He served there until 1954 and then taught graduate programs in his speciality in Uruguay and Brazil and consulted on projects in Europe and South America.

In "Important Western Browse Plants", Misc. Publication 101 of the United States Department of Agriculture, July, 1931, page 4 notes that there were approximately 1,100 National Forest Range Plant Collectors and that William Chaplin, Jr. was one of 52 who had collected more than 200 annotated specimens kept at the Forest Service archives in Washington, D.C.

Of all his accomplishments, it is this last one which is the basis for this Volume's dedication. As he walked the hot hillsides of the Black Range during 1914 and 1916 he might have dreamed of a remarkable future, or he might simply have hoped for a bit of shade and water.

Locations Where Many Plant Species In The Black Range Have Been Observed/Collected

Specimens noted in this work were collected at various locations in the Black Range. There are, however, some locations where a great many specimens were collected. Several of these locations are indicated on the maps in the following section. These detailed maps are copied from the [Gila National Forest - South Half Map](#), which may be downloaded at this link.

Dates associated with the names of collectors are the dates in which specimens referenced in this checklist were collected.

R. A. (Bob) Barnes, Editor
rabarnes@blackrange.org
Hillsboro, New Mexico

ROAD VIDEOS - MAPS 1 & 2

Major access roads provide access for the locations referenced on Maps 1 and 2. Road videos are provided as follows:

- [North Star Road](#)
- [Powder Horn Ridge Road](#)
- [Powder Horn Canyon Road](#)
- [Cooney Road](#)
- [NM-35](#)
- [McKnight Spring Road \(to McKnight Cabin\)](#)

Conditions of the roads have probably changed since the videos were recorded.

Wall Lake: A rather substantial lake with marshy edges. Yvonne Cauvin (2012), C. R. Hutchins (1980-1990), Clyde J. Jones (1960), and others collected here. See the [Black Range Website](#) for photographs of this area.

Taylor Creek: Where William C. Martin (1959-1962) and others have collected. Taylor Creek flows into Wall Lake.

Me Owl Hill: One of the locations where R. Fletcher (1977-1985) collected specimens.

Diamond Creek: Among the plant collectors who frequented this site are Eric H. Roalson (1993-1994), P. J. Knight (1981-1982), and Jim McGrath (2004 to present).

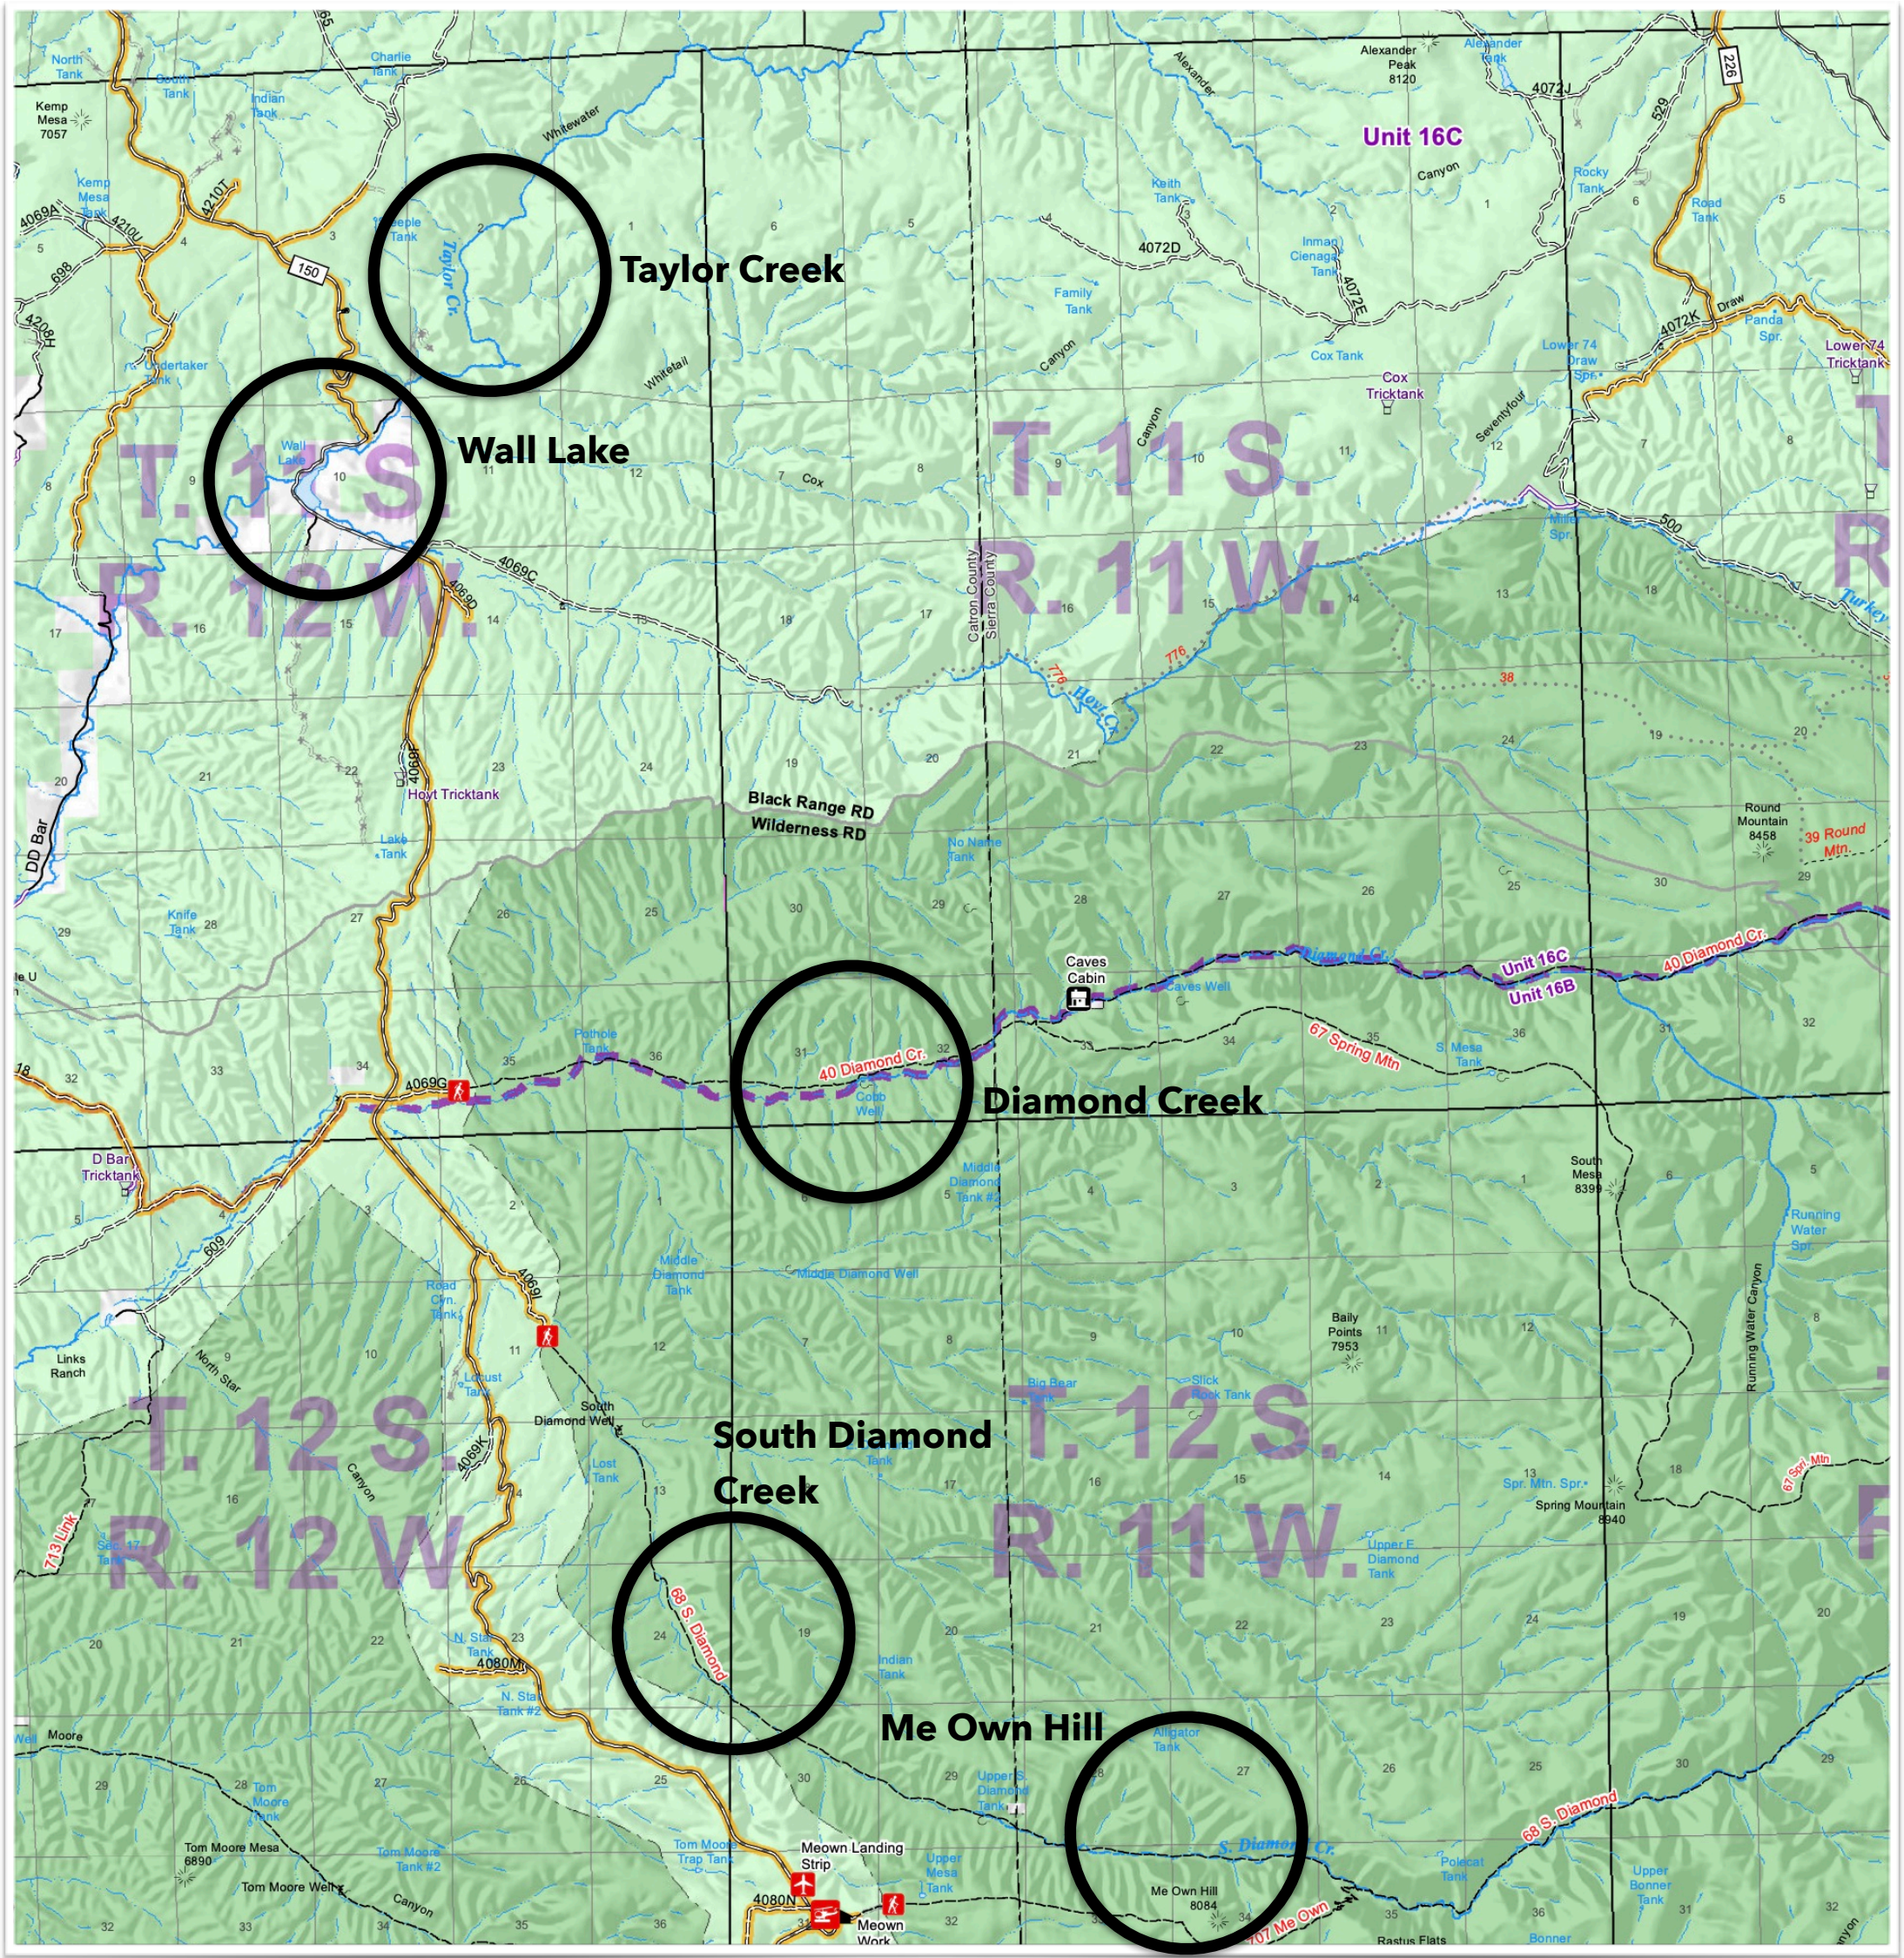

South Diamond Creek: R. Fletcher also collected at this location.

MAP 2

Black Canyon: Among the collectors who visited this site are P. J. Alexander (2005-2016), Richard Spellenberg (1970-2005), D. H. Pellissior (1971-1974), and Larry L. St. Clair (1996).

Rocky Canyon: Among the collectors who visited this site are Russ Kleinman (2009-2018) and K. W. Allred (2012).

McKnight Mountain and Mimbres Lake: Although close together, these two sites offer very different habitats for collectors. The trail from McKnight Cabin to McKnight Mountain is described in the first edition of "[Walks In The Black Range](#)" (Trail 2). Charles Huff (1994-1996), Leila M. Shultz (1974) collected at this site.

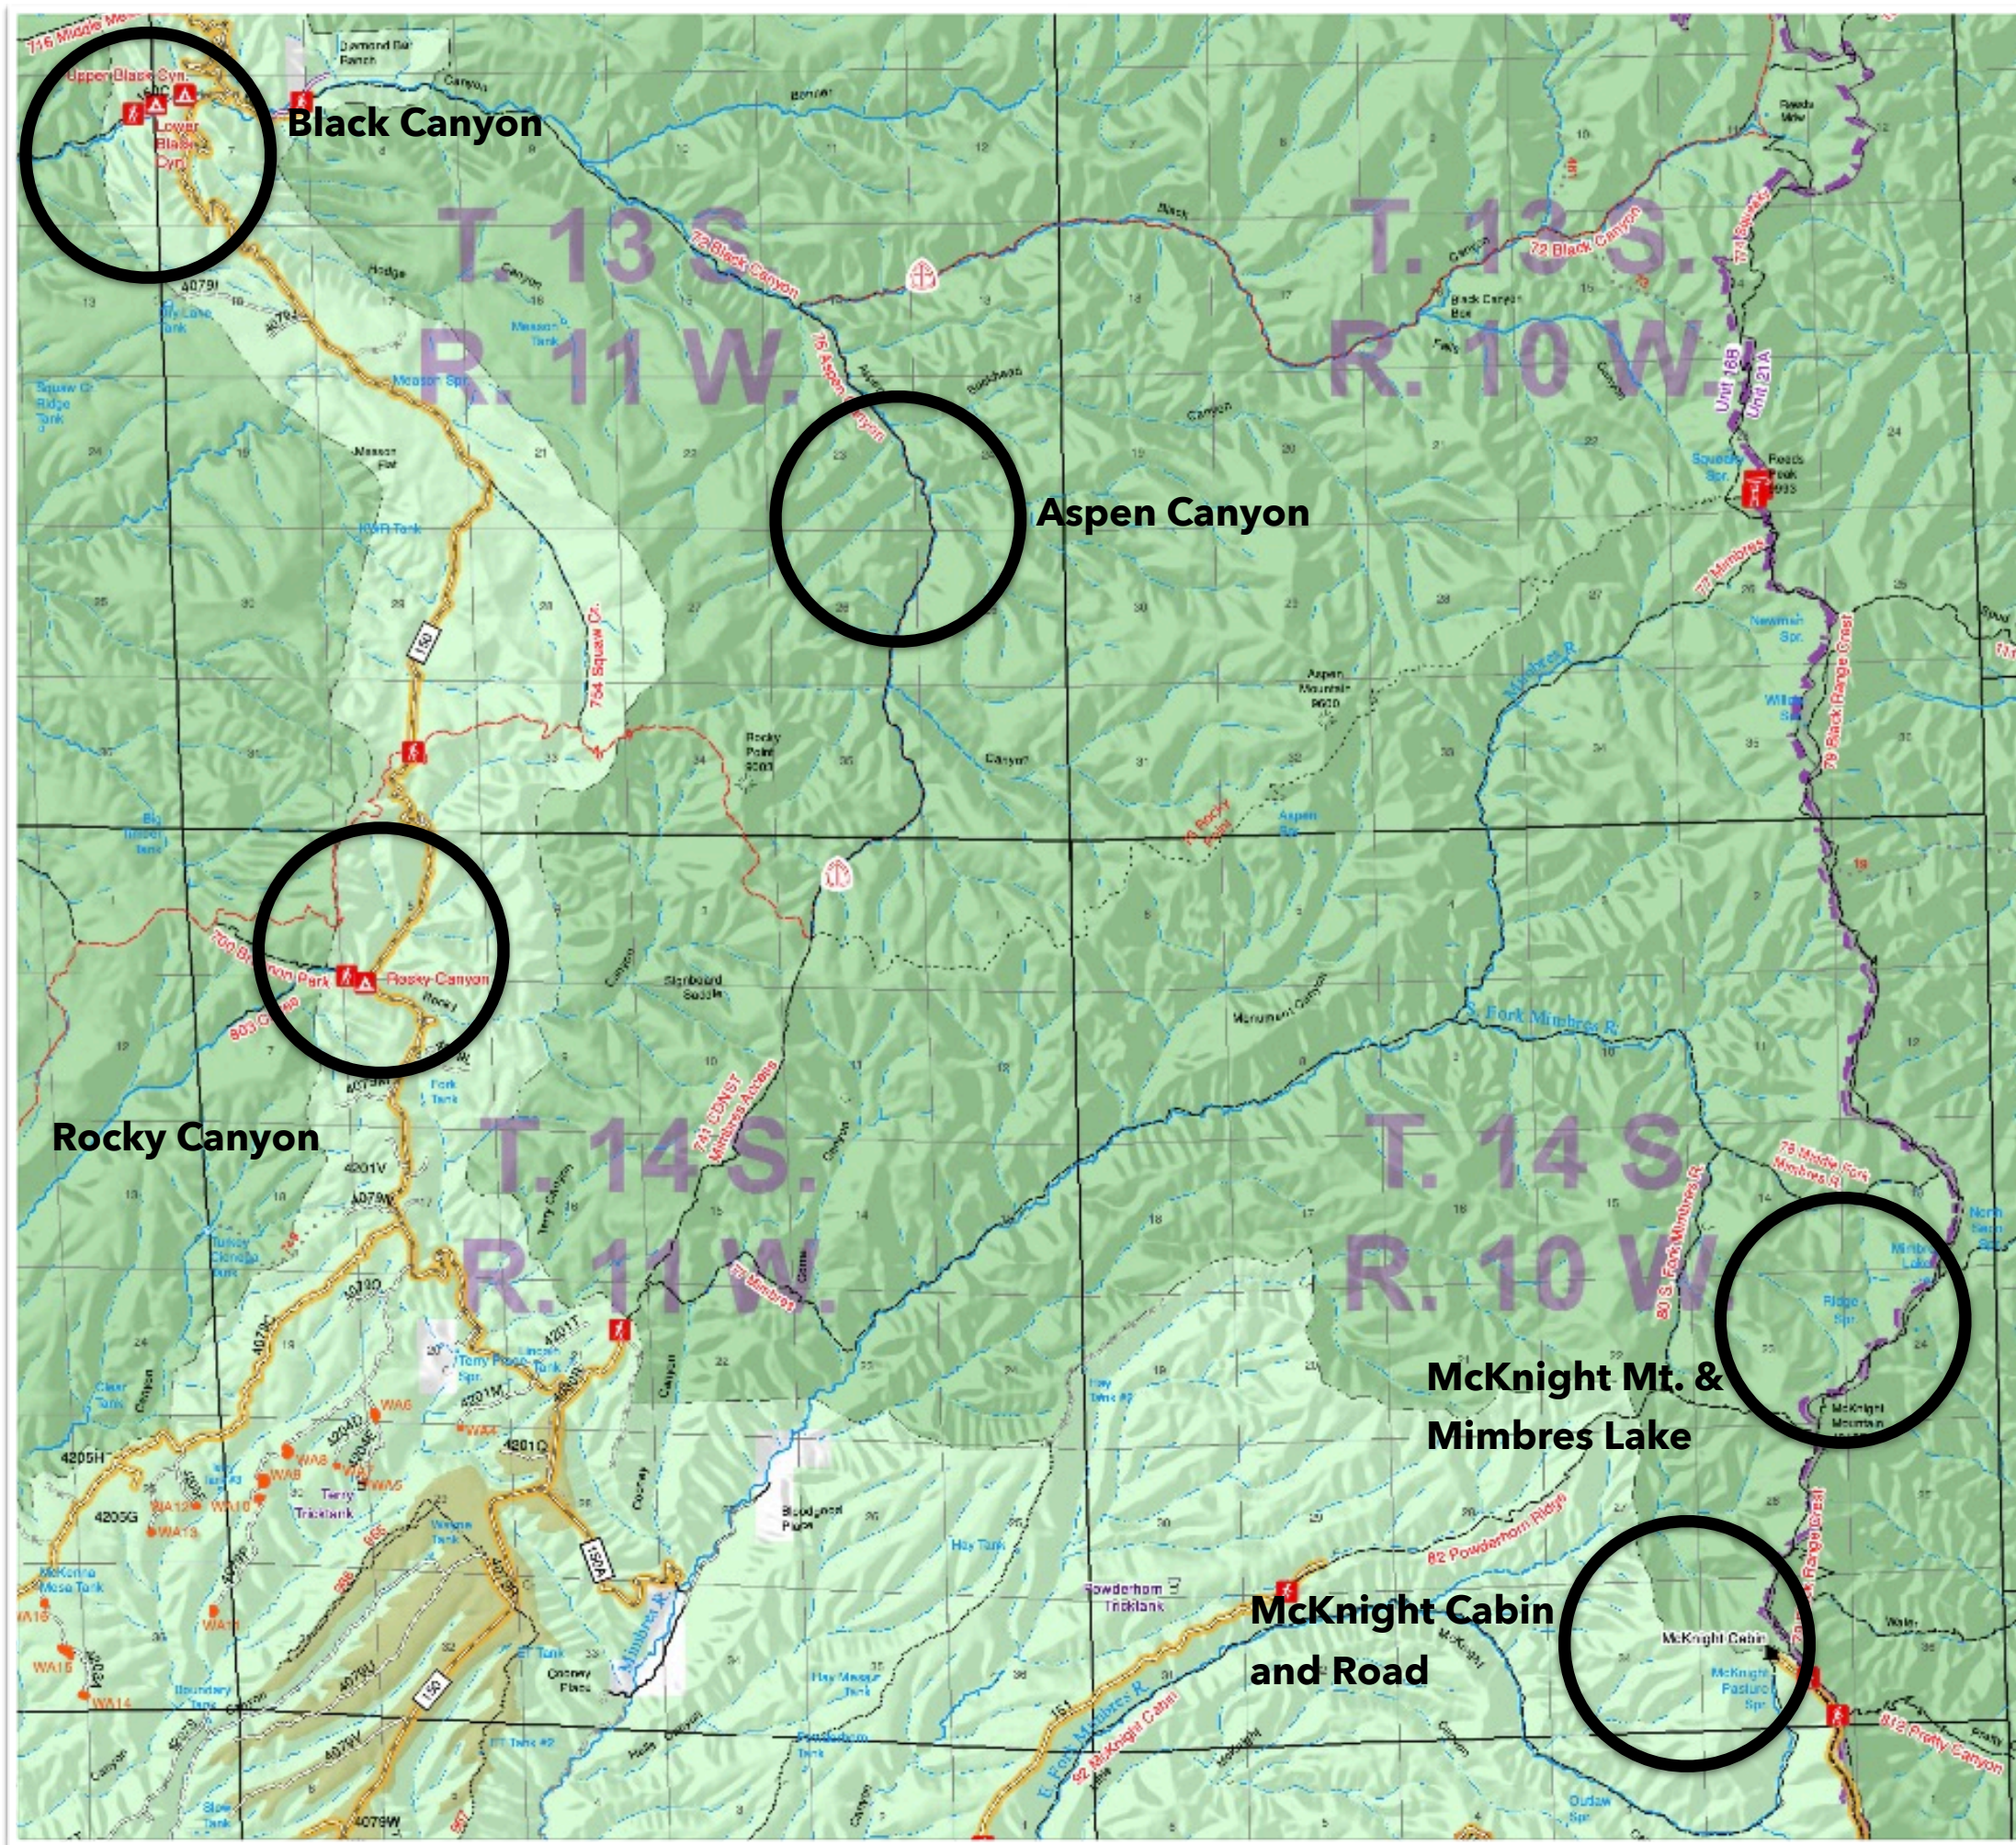

Map 1. North end of North Star Road on the west side of the northwest section of the Black Range.

McKnight Cabin and McKnight Canyon Road: As is obvious in the McKnight Spring road video, the road from NM-35 up to McKnight Cabin can be long and rough. P. C. Tonne (1999-2010), W. R. Norris (2007-2018), Russ Kleinman (2009-2018), D. H. Pellissior (1971-1974), and K. Kindscher (2007-2016) collected here.

Aspen Canyon: Among the people who collected in this canyon was C. R. (Bob) Hutchins (1980-1990) and Paul Boucher (1993).

MAP 3

Map 3 covers the NM-152 corridor, the major east-west road across the Black Range and the middle section of the Black Range Crest Trail. These two features (the road and the trail) provide access to many hiking (and thus plant viewing) areas in the Black Range.

Map 2: Southern portion of North Star Road. Access to North Star is off of NM-35, as is access to the McKnight sites (see road videos).

There are three road videos which cover the area in Map 3, they are:

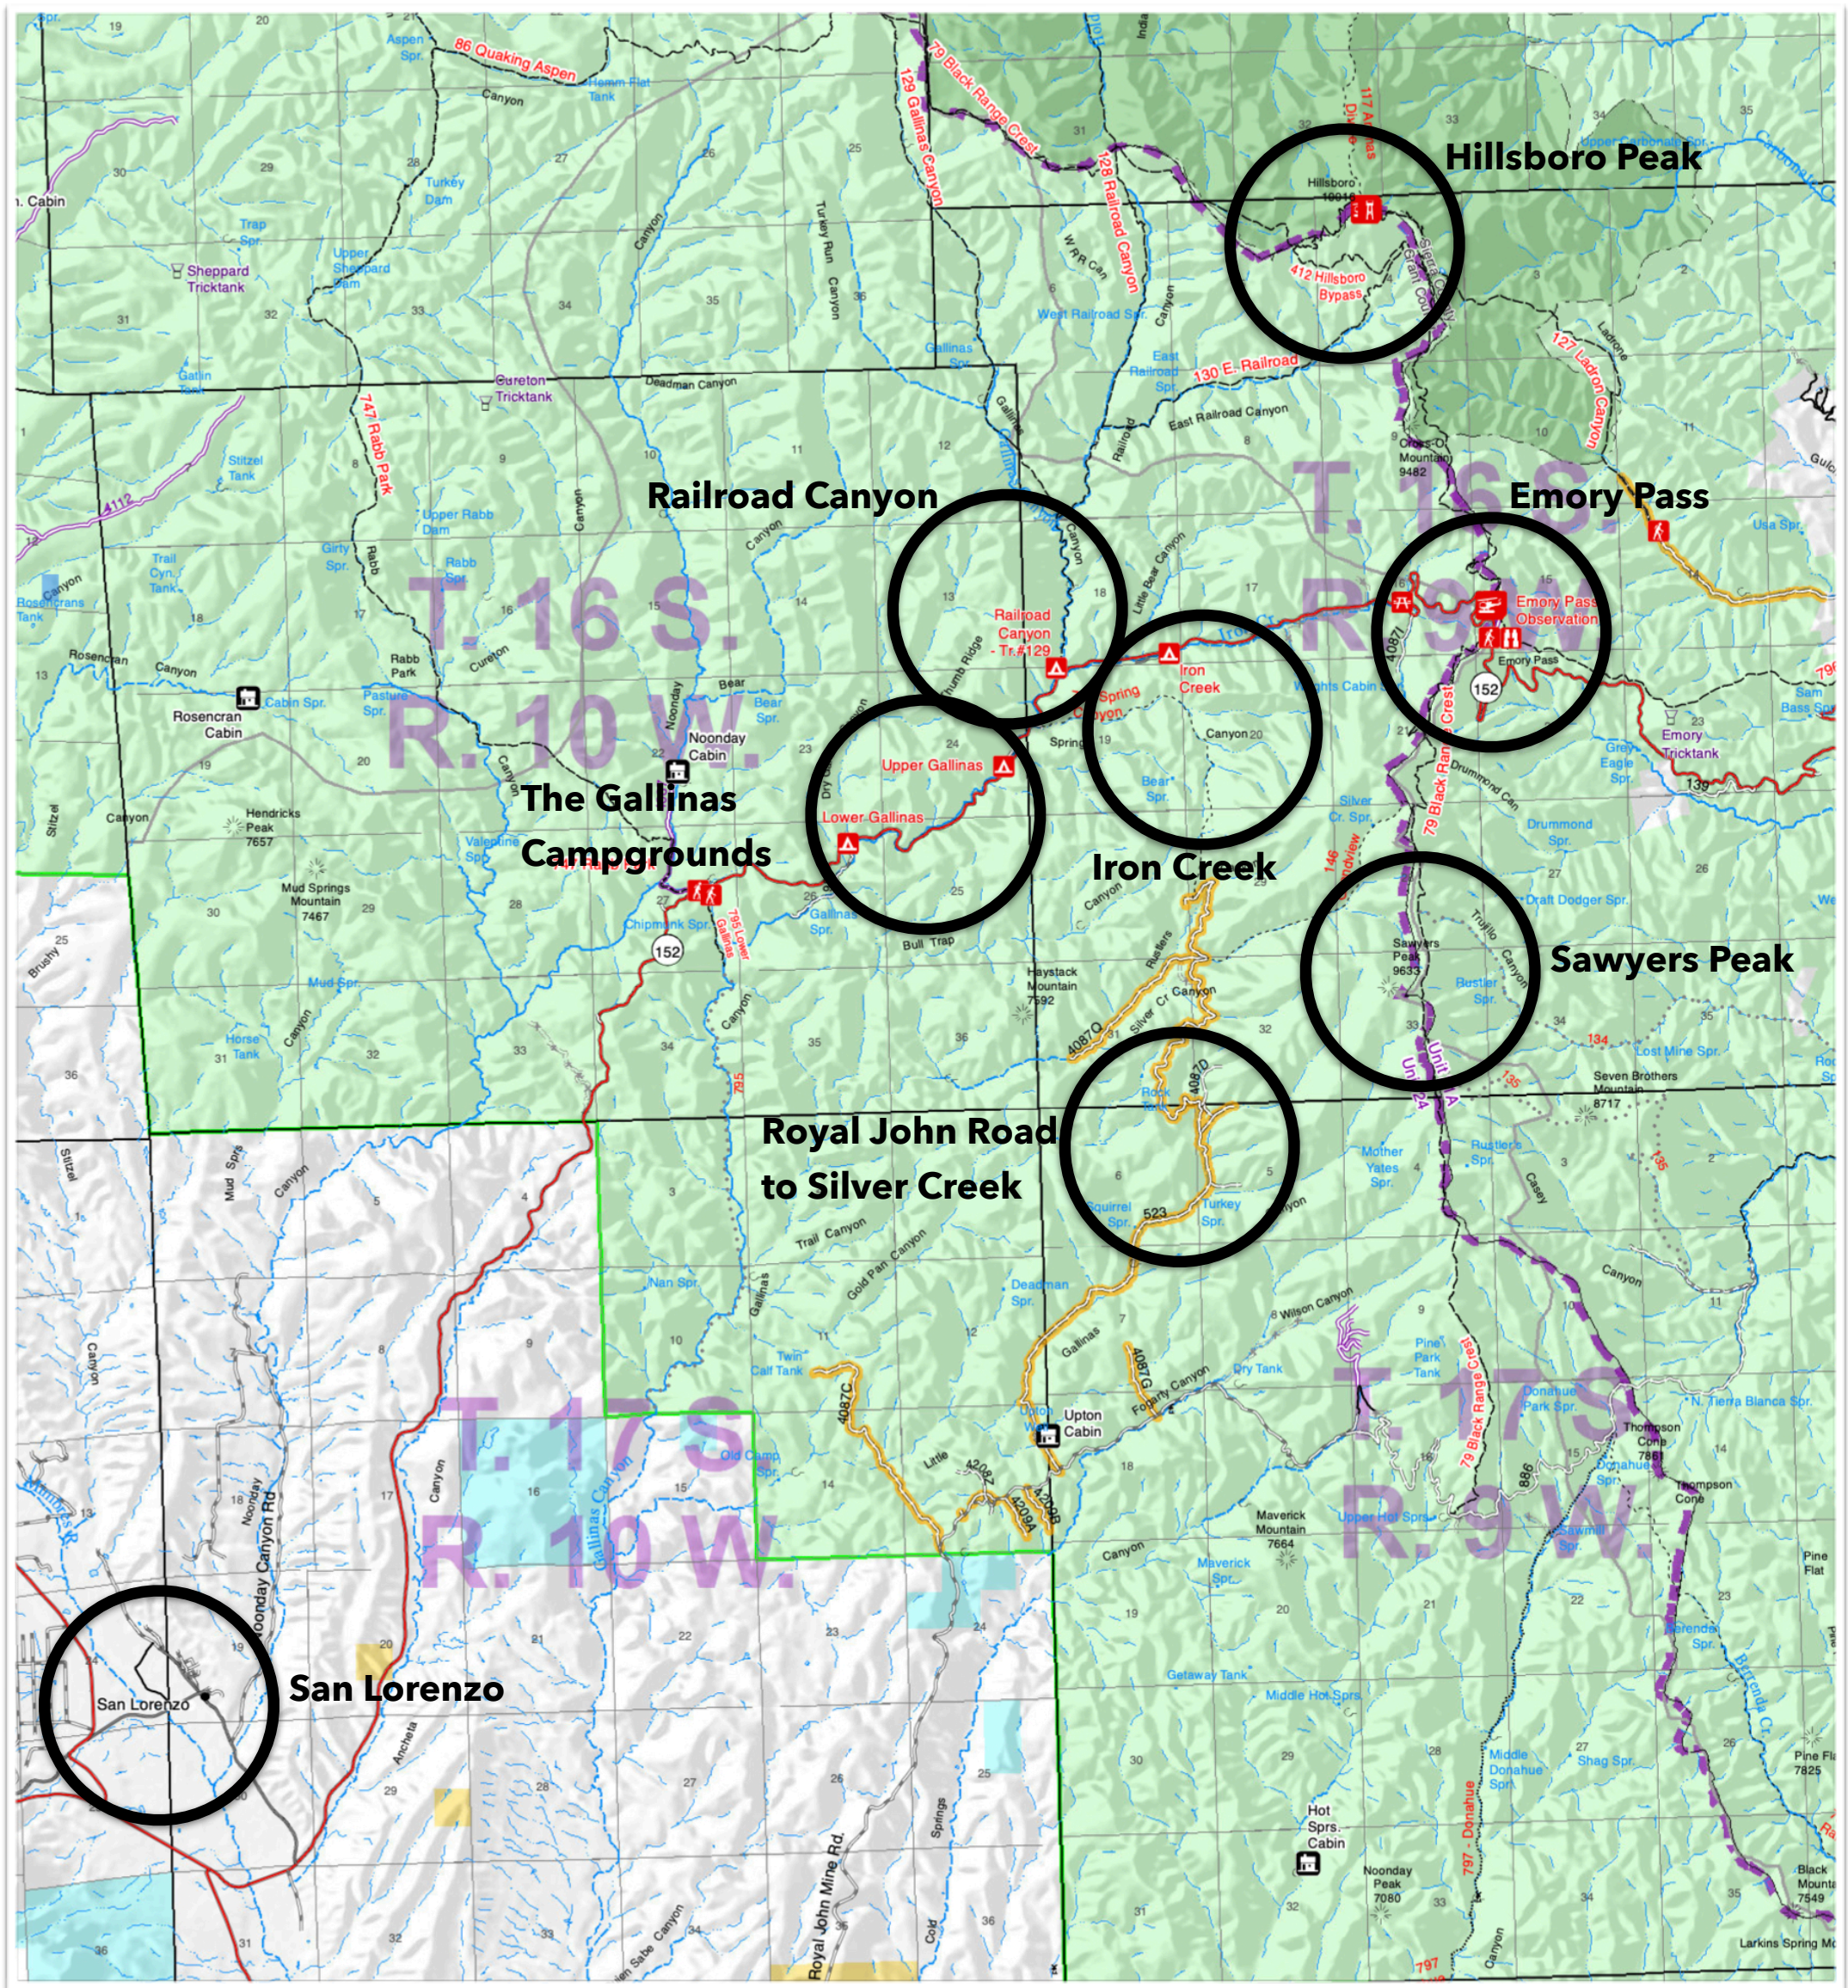

- [Kingston to Emory Pass;](#)
- [Emory Pass to San Lorenzo;](#) and
- [Royal John Mine Road.](#)

Access to many of these areas is provided by trails covered in "[Walks in the Black Range](#)".

Hillsboro Peak: The most typical approach to Hillsboro Peak is along the Black Range Crest Trail from Emory Pass. This walk passes through a variety of habitats and provides

access to a number of collecting sites including Hillsboro Lake (which is a puddle - sometimes). Among the people who have collected along this route are; Eugene M. Jercinovic (2009-2010), Robert C. Sivinski (1993-2018), O. B. Metcalfe (1901-1905), Kenneth D. Heil (1998-2012), Russ Kleinman (2009-2018), and K. Blisard (2011-2018).

Railroad Canyon: Railroad Canyon is one of the most popular areas in the Black Range. The walk from the campground to the first fork is properly called the Gallinas Trail. At the fork, the Gallinas trail turns west and then northwest. The trail up Railroad Canyon continues to another fork, straight north to Holden Prong Saddle. The

Map 3: The NM-152 Corridor and Hillsboro Peak south to Black Mountain.

east fork goes up East Railroad Canyon to the Hillsboro Bypass Trail. Both trails travel along a free-flowing stream until you reach their upper reaches. Russ Kleinman (2009-2018), K. Blisard (2011-2018), and R. S. Felger (2011-2015) have all collected specimens referenced in this checklist.

Black Range Crest Trail (north to Hillsboro Peak, south to Sawyers Peak) and the trail from the Kingston Cemetery. Among those who have collected plants in this area are; E. F. Castetter (1939-1954), Richard J. Shaw (1956-1959), R. D. Worthington (1983-1998), Russ Kleinman (2009-2018), K. Blisard (2011-2018), and Bernadette Kuhn (2006).

Emory Pass: The highest point on NM-152 is at Emory Pass. There is an overlook at the Pass and access to the

Sawyers Peak Trail: From Emory Pass, the Black Range Crest Trail heads south, first to Sawyers Peak and then on even farther south along the crest. Among those who have collected in this area is O. B. Metcalfe (1901-1905).

Iron Creek Campground: E. F. Castetter (1939-1954), O. B. Metcalfe (1901-1905), T. H. Nash III (1973), Russ Kleinman (2009-2018), and K. Blisard (2011-2018) have all collected in this area. West from Emory Pass, NM-152 first passes Wright's Cabin, there are several canyons which are accessible in this general area.

Gallinas Canyon (Upper and Lower Gallinas Campgrounds): Richard D. Worthington (1983-1998), R. Fletcher (1977-1985), David M. Studhalter (1934), Robert Sivinski (1993-2018), T. K. Todsén (1969), Russ Kleinman (2009-2018), K. Blisard (2011-2018), and Tim Thibault (2016) are some of the individuals who have collected in this area.

Royal John Mine Road: The Royal John Mine Road starts on NM-61 along the Mimbres River and climbs eastward to the (among other places) upper reaches of Silver Creek. G. Rink (2016) collected in this area.

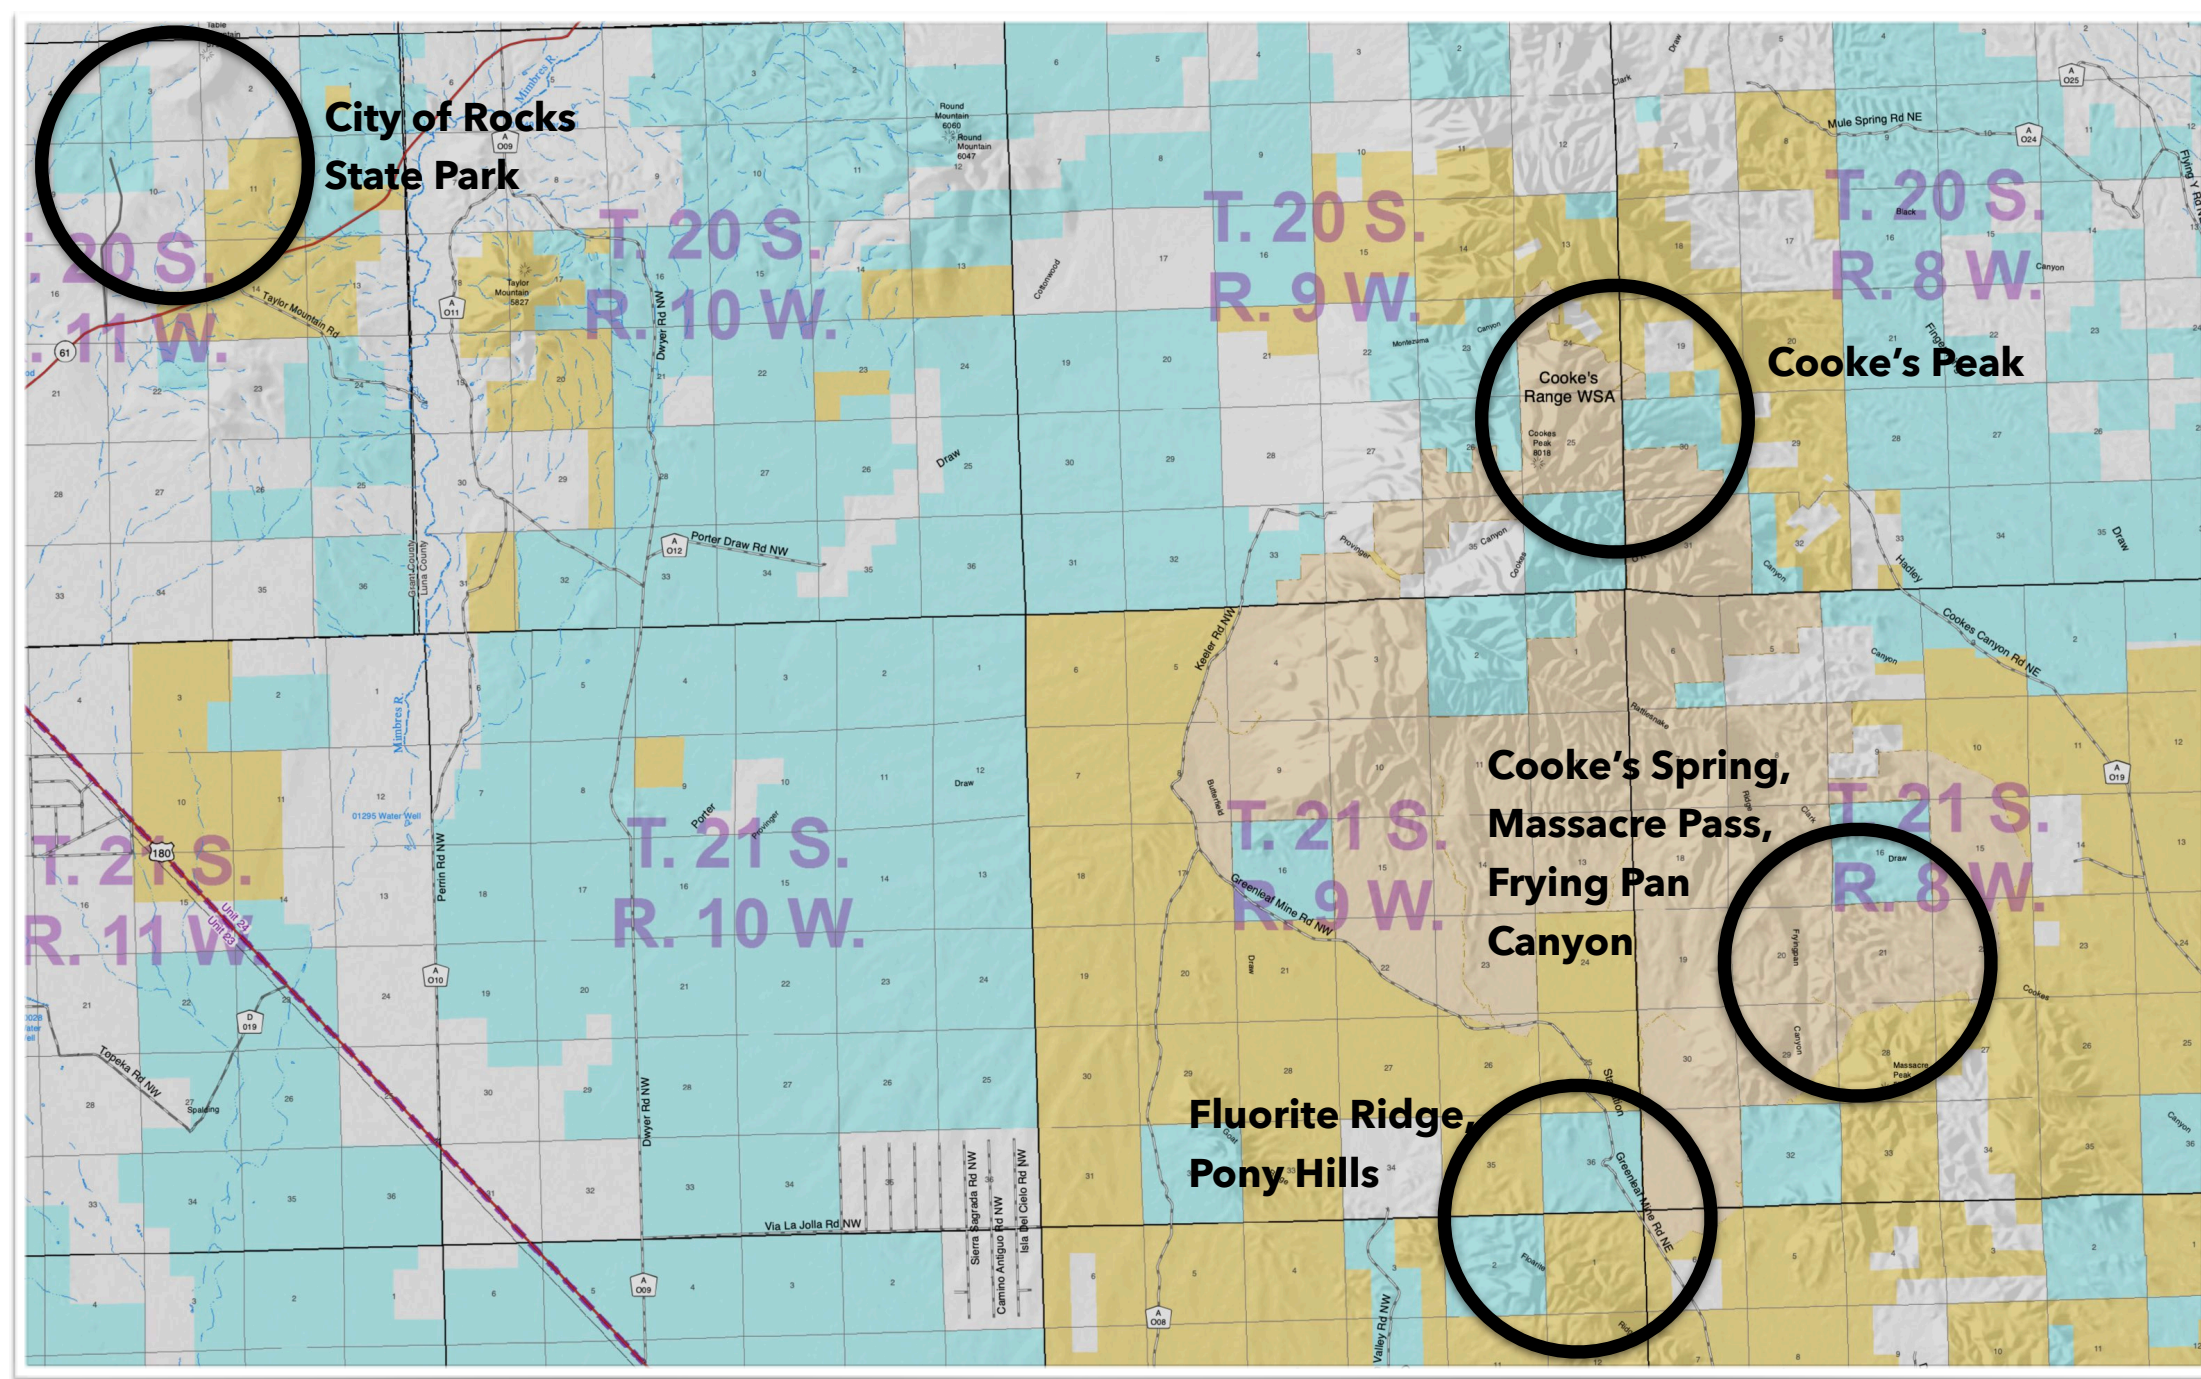

San Lorenzo: Raymond C. Jackson, Eugene M. Jercinovic (2009-2010), Robert C. Sivinski (1993-2018), Charles W. Irish (1878), R. D. Worthington (1983-1998), and Kenneth D. Heil (1998-2012) are some of those who have collected in this area. San Lorenzo is a small community on the Mimbres River and offers a variety of habitats to explore.

MAP 4

Access to the area covered by this map is primarily from NM-61 (for City of Rocks State Park and Dwyer Road) and NM-26 (for Fluorite Ridge, Frying Pan Canyon, and Cooke's Peak). Road videos are provided for the following routes:

- [Dwyer Road](#);
- [NM-61, City of Rocks to San Lorenzo](#);
- [Pony Hills \(Fluorite Ridge\)](#);
- [Frying Pan Canyon](#);
- [Fort Cummings](#); and
- [Cooke's Peak](#).

There are also several trail descriptions in "[Walks In The Black Range](#)" which cover access at roads end.

Map 4. The southern part of the Black Range (Cooke's Range, Fluorite Ridge, and City of Rocks State Park) is lower in elevation and thus a somewhat different flora.

City of Rocks State Park: This desert park preserves interesting geologic formations and a rather rare (these days) flora habitat - a *ciénaga*. W. W. Holland (2003-2005), Kenneth D. Heil (1998-2012), W. R. Norris (2007-2018), J. Kirker (2007), and D. E. Crosley (2009) are some of the numerous people who have collected plants at this site.

Fluorite Ridge/Pony Hills: Along with Frying Pan Canyon, this site hosts some of the best petroglyphs in southern New Mexico. H. J. Dittmer collected plant specimens at this site.

Frying Pan Canyon, Cooke's Spring, Massacre Pass: This area is steeped in history with the pass and Cooke's Spring being the anchors for most of the early travel in this area. Jack Carter (1991-2009) collected here.

Cooke's Peak: J. T. Columbus (1987), S. Munoz (1987), and J. P. Hubbard (1978-1980) are some of the individuals who collected specimens in this area.

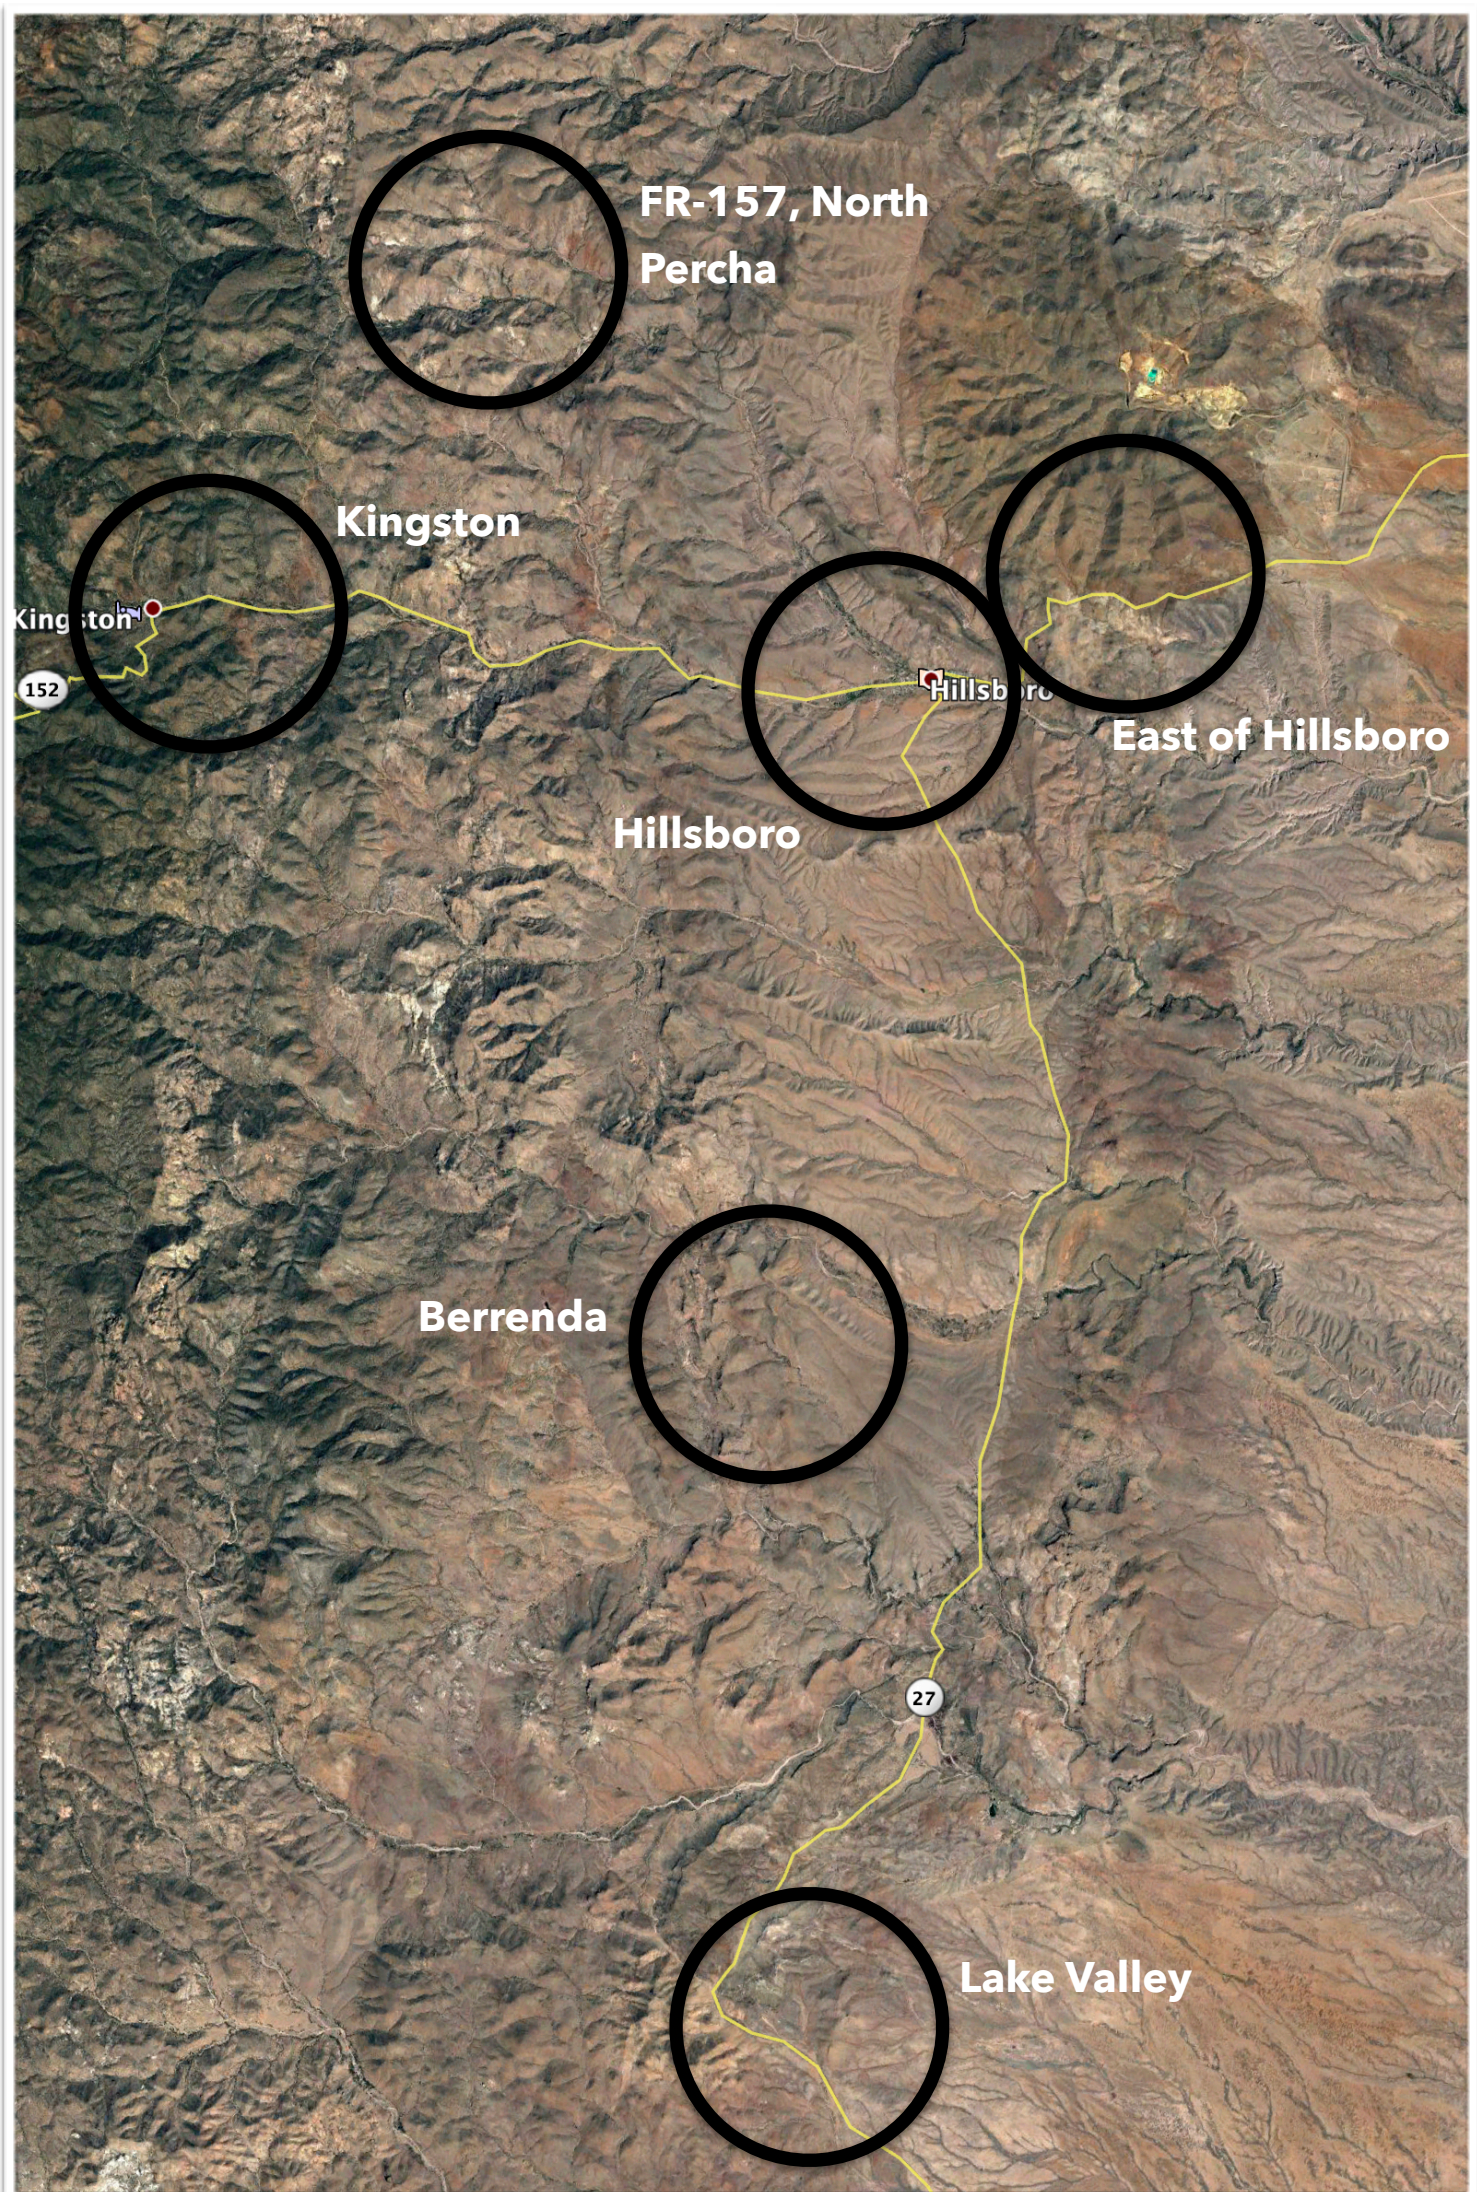

MAP 5

Access to the area covered in this map is provided by NM-27 (N and S), NM-152 (E and W), and FR 157 (N and S - a.k.a. North Percha Road). Road videos for the area are as follows:

- [Hillsboro to Kingston;](#)
- [NM-152 to Carbonate Creek, FR-157;](#)
- [Hillsboro to Nutt \(NM-27\);](#)
- [East of Hillsboro to Hillsboro;](#)
- [Warm Springs Canyon;](#)
- [Road to Andrews;](#)
- [Hillsboro to Lake Valley;](#) and
- [Tierra Blanca Road.](#)

The [Walks In the Black Range](#) page on the Black Range website has links to downloadable trail guides to the area.

Lake Valley: This old mining town is rich in mining-history. The areas around town, including places like Apache Hill

Map 5: Ranging from Lake Valley to the south to Forest Road 157 in the north this map takes in many collecting areas which are readily accessed.

about a mile north have been rich areas for plants as well as silver. R. C. Jackson (1952-1962), H. D. D. Ripley (1953), Robert Sivinski (1993-2018), and M. G. Beals (1904-1914) all collected plants in this area.

Berrenda: The foothills, low desert, and trails up to the Black Range Crest provide a wide variety of habitats to explore. Kenneth D. Heil (1998-2012), O. B. Metcalfe (1901-1905), and William R. Chapline, Jr. (1914-1916) collected in this area.

Hillsboro: The area around Hillsboro has been a favorite collecting locale over the years. O. B. Metcalfe (1901-1905), Loraine Yeatts (1987), Kenneth D. Heil (1998-2012), Ruth A. Nelson (1932), Kenneth W. Parker (1935), and Robert Sivinski (1993-2018) are among those who collected plants specimens in and near the town.

East of Hillsboro: This area is steeped in mining history. The old mining roads and trails in this area are covered in Volume 1, of the second edition of [Walks In the Black Range](#). Among those who collected plant specimens in the area are Almut G. Jones (1983), E. F. Castetter (1939-1954), and Loraine Yeatts (1987)

Kingston: The pinyon, oak, and pine habitat around Kingston makes for rich collecting grounds. O. B. Metcalfe (1901-1905), Richard D. Worthington (1983-1998), D. Potter (1963), Robert Sivinski (1993-2018), Charlotte O. Gooding (1938-1939), William R. Chapline, Jr. (1914-1916), and Steve L. O'Kane, Jr. (2010) are a few of the people who have collected plant specimens in the area.

Forest Road 157 (North Percha Road): Kenneth D. Heil (1998-2012), Diego Villalba (1995), Richard D. Worthington (1983-1998), and C. R. (Bob) Hutchins (1980-1990) are some of the people who collected plant specimens in the area adjoining this road. Many canyons are crossed by this road, including Carbonate, Mineral, and North Percha.

The North East

The northeast quadrant of the Black Range is generally accessed from the roads out of Winston and Chloride. The map linked to above (at the start of this write-up) provides detail for those areas. In general, this area is not well represented in the specimen list of this checklist.

The Land Less Visited

The listing of locales, above, is very general in nature. The Black Range is a place where you can stop beside a road and walk, no trail is necessary. It may be rough, even dangerous, but access is readily had. There is no reason to believe that areas which have been less frequently visited by collectors are any less diverse in their flora.
